Search for job postings and find 2 jobs that appeal to you and why.

## 1. Junior Web Developer – MarCom

I chose two jobs that do not punch above my weight, so to speak. Both have reasonable qualifications. And, in especially in several months when I complete the program, I think I will have a good chance of performing them competently.

This one in particular spoke to me because it incorporates development and management of mobile/tablet applications, which is of particular interest to me—even though we will not learn too many mobile app development-related technologies in this course. Also, it is a full-stack job that requires knowledge of experience with both front-end and back-end technologies.

I think I would enjoy the various aspects of the job, which is for the communications company that oversees University Federal Credit Union's web presence. Such responsibilities include being informed about internet security technologies, consumer protection laws, current credit union policy and procedures and other credit union issues as well as reviewing SEO strategies.

## 2. In House Front End Wordpress Developer

This job seems right up my alley. In these first few weeks of the boot camp I am most enjoying hand-coding HTML/CSS to build an aesthetically pleasing and useful website.

I would very much enjoy this pure front-end web development job. Having worked in print journalism for several years now, graphic design is something I've always been interested in. I took an introductory graphic design course in college and have wondered whether I would have taken to it and built a career out of it had I continued taking design classes. Now that I am designing websites I am getting to see those skills develop.

I've always had an eye for company branding from a design perspective, and this is something I'd love to explore in a web development role.
